## DX PULL HANDLE INSTALLATION TEMPLATE

**ATTENTION:** Mount outside handle on the exterior face of your door wherever you desire. Be sure to check that inside latch mechanism reaches strike plate and **does not** interfere with prime door hardware.

IF BACK PLATE IS INCLUDED  
IT MUST BE INSTALLED FIRST

IF BACK PLATE  
IS NOT INCLUDED  
DO NOT DRILL  
THIS HOLE

**CAUTION!**  
DO NOT DRILL  
RIGHT THROUGH  
DOOR

1. If **backplate is included** drill all four holes as indicated on template. If **no backplate** drill only top three holes.
2. Assemble handle to housing as shown in (fig.2)(if not already assembled)
3. Place spindle with spring attached **fig.1** as shown in fig.1 onto outside of door as shown in assembly view (fig.3)
4. Place DX Pull Handle onto outside of door. With handle on, the spindle must project 5/16" through inside of door (fig.3) and not touch mechanism of inside latch.
5. Fasten pull handle to inside latch with machine screws provided.
6. Attach latch strike (shim if necessary with plastic shims) with the 6x1" screws to wooden door jamb so strike firmly engages latch. (fig.4)
